binding assays and *in vivo* models. For instance, *t*-methylbenzylamine was reductively allylated with 1-methyl- α -pipерidine (NMOH, HOCAC, NACRIB), 20 h, room temperature). The resulting salts were allylated with 11, (t-methylbenzyl)allylamine. The resulting salts were subsequently purified by chromatography. The resulting salts were then used for the treatment of disease in which receptor activity has a beneficial effect.
